Q&A session preparation

What are your expectations for this project?

Can we see the dataset? Is there only one dataset? Can we combine it with some dataset we find online?

You have mentioned that the last couple of years you have invested a lot of effort in the areas of data governance and data science. Are there any data driven measures applied, and if yes, can you supply more details?

Do you have other companies you work with?

With how many pharmacies manufactures and distributors does your client work with?

What is the process of the second activity (advising pharmacists on how to perfect their business)? What tasks does it include? Is this optimization advise based on data, are they striving it to make more data-driven or are they focused on cutting costs?

You say that the dataset is coming from the operational systems from the pharmacies, or a pharmacy group. With how many people do you share this dataset with? How secure is that dataset if it is shared with so many people?

Do you have any previous project regarding the data analysis about the pharmacy?
